

Figure 0. One local model, every coding agent, no client-side changes.

Agents disagree about the wire protocol. Claude Code speaks Anthropic Messages, Codex speaks OpenAI Responses, and most others speak OpenAI Chat Completions. k3 detects which one is calling from the route, headers, user agent and body shape, then translates the request and the streamed response, including tool calls in six formats and reasoning content that would otherwise be dropped between turns. The engine behind it serves an ordinary OpenAI Chat endpoint, so any backend can take its place. Verified against k3/presets.py, k3/dialects/ and k3/toolcalls.py.
